# **User Catalog Management System**

## **1. Introduction**

### **1.1 Purpose**

The User Management System (UMS) is a comprehensive solution designed to manage user data securely and efficiently. It incorporates features like role-based login, password hashing, email notifications, and advanced user data handling. The system ensures robust security, seamless user interaction, and effective administrative functionalities.

### **1.2 Intended Audience and Reading Suggestions**

This documentation is intended for:

- **Developers:** To understand the system architecture and functionalities for further development or maintenance.
- **System Administrators:** To manage the system effectively.
- **Testers:** To validate the functionality and identify potential issues.
- **Stakeholders:** To comprehend the capabilities of the system.

## 1.3 Product Scope

The User Management System aims to streamline user data management with features such as:

- Secure authentication and authorization using Spring JWT.
- Role-based access control for Users and Admins.
- Password security using SHA-512 hashing.
- Email notifications to users when their data is added or updated by the admin.
- Advanced search, sorting, and PDF export functionalities.
- Restricted webpage access post-logout until re-login.

## 1.4 References

- Spring Framework Documentation: <https://spring.io/docs>
- JWT Documentation: <https://jwt.io>
- SHA-512 Hashing: <https://www.ietf.org/rfc/rfc6234.txt>

## **2. Overall Description**

### **2.1 Product Perspective**

The UMS is a standalone web application built using Spring Boot, designed to simplify user management tasks for administrators. It integrates with an email service for notifications and utilizes JWT for secure token-based authentication. The architecture follows modern design principles, ensuring scalability and maintainability.

### **2.2 Product Functions**

The primary functions of the UMS include:

- User data management with CRUD operations.
- Authentication using Spring JWT.
- Role-based access control.
- Password hashing for enhanced security.
- Email notifications.
- Search, sort, and filter capabilities for user lists.
- PDF export of user data.
- Secure session management.

## **2.3 User Classes and Characteristics**

- Admin: Can manage user data, view lists, and perform advanced actions like exporting data and sending notifications.
- User: Can access their data and perform limited interactions based on their role.
- System Auditor: Reviews logs and ensures compliance with security protocols.

## **2.4 Operating Environment**

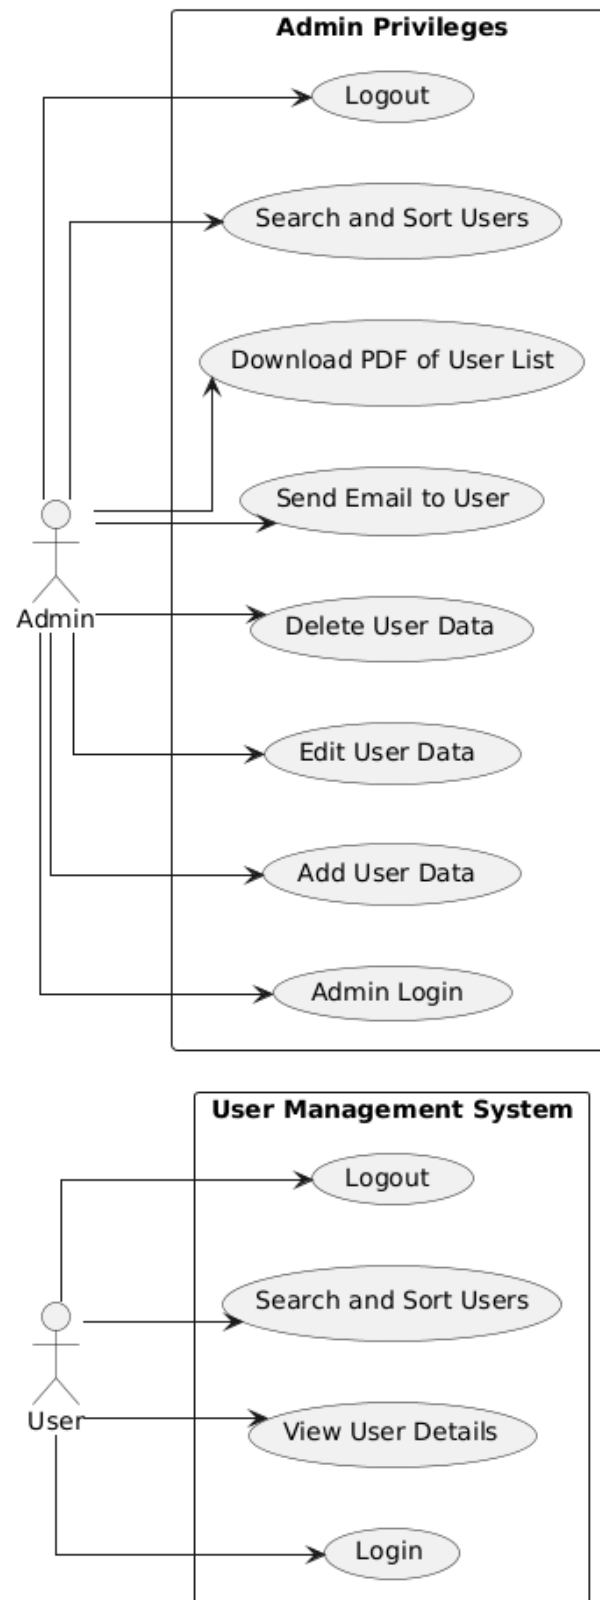

- Backend: Spring Boot framework.
- Frontend: Any web browser supporting modern standards (e.g., Chrome, Firefox).
- Database: Relational database (e.g., MySQL or PostgreSQL).
- Email Service: SMTP-compatible email server.
- Server Environment: Linux-based servers for deployment.

## **2.5 Design and Implementation Constraints**

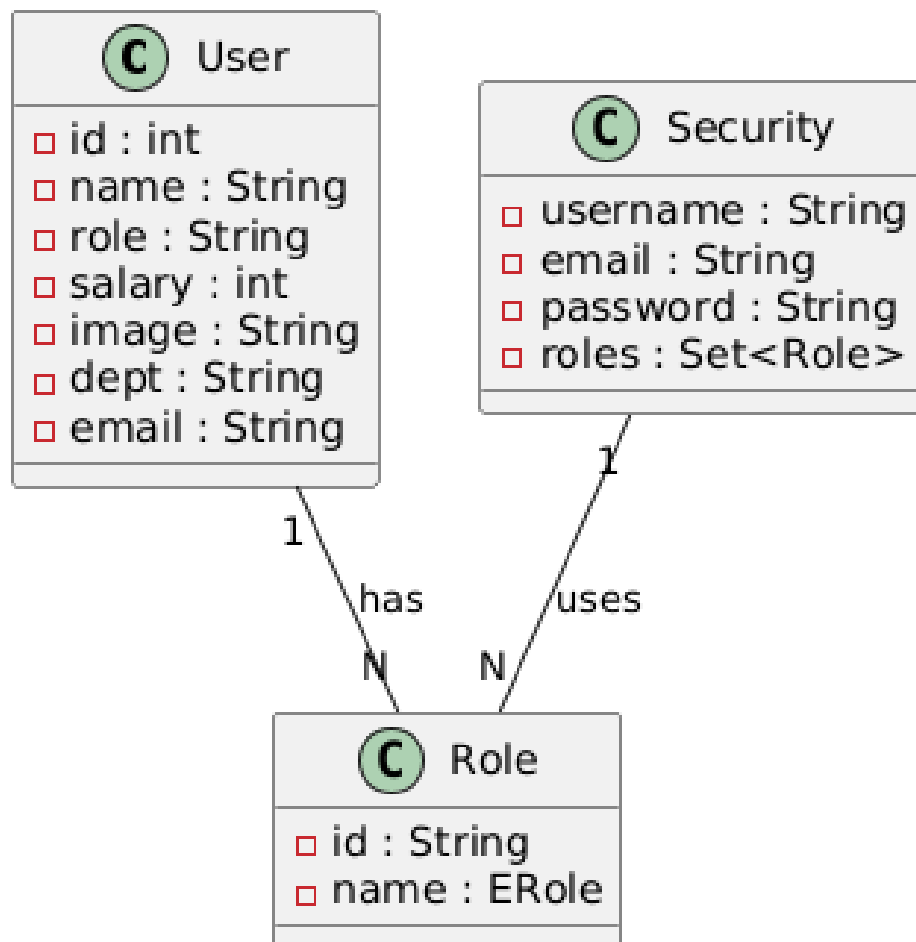

- Follows RESTful API principles.
- Secure password handling using SHA-512.
- Limited to two roles: Admin and User.
- System scalability for future integration with external systems.

## **3. External Interface Requirements**

### **3.1 User Interfaces**

- Login page with role-based access.
- User dashboard displaying relevant user information.
- Admin dashboard with advanced functionalities like search, sort, and export.
- Error pages for unauthorized access and system errors.

### **3.2 Software Interfaces**

- JWT for authentication and authorization.
- Database for storing user and role information.
- SMTP for email notifications.
- Integration with third-party libraries for PDF generation and password hashing.

### **3.3 Hardware Interfaces**

- Server requirements include 4 CPU cores and 8GB RAM for optimal performance.
- Database server with at least 100GB storage capacity for user records.

### **3.4 Communication Interfaces**

- HTTP/HTTPS protocols for client-server communication.
- Secure connections for email notifications.

## **4. System Features**

### **4.1 System Feature 1: Secure Authentication and Authorization**

- Spring JWT ensures token-based login.
- Role-based access control for Admin and User roles.
- Supports session expiration and token refresh mechanisms.

### **4.2 System Feature 2: Password Security**

- User passwords are hashed using SHA-512 before storage.
- Enhances security by preventing password exposure.
- Includes validation for password strength.

### **4.3 System Feature 3: Email Notifications**

- Admins can notify users via email when their data is added or updated.
- Uses a secure SMTP connection.
- Customizable email templates for various notifications.

### **4.4 System Feature 4: Data Management and Accessibility**

- Admins can search, sort, and filter user data based on multiple criteria.
- Users can view their data securely.
- Provides pagination for efficient data handling.

#### **4.5 System Feature 5: PDF Export and Session Management**

- Admins can export user lists to PDF format.
- Users are restricted from accessing pages post-logout until re-login.
- Supports audit logging for session activity.

#### **4.6 System Feature 6: Advanced Search and Sorting**

- Multi-criteria search functionality for user data.
- Sorting options by name, role, department, and salary.
- Filters for date ranges and role-specific data.

#### **4.7 System Feature 7: Role Management**

- Admins can assign or modify roles for users.
- Supports the addition of new roles for future scalability.

#### **4.8 System Feature 8: Logging and Monitoring**

- Tracks all system activities for security audits.
- Logs user login/logout events and data changes.
- Monitoring dashboards for admin oversight.

#### **4.9 System Feature 9: Error Handling**

- Displays user-friendly error messages for system issues.
- Detailed error logs for debugging and resolution.

## **5. Other Nonfunctional Requirements**

### **5.1 Performance Requirements**

- The system should handle up to 1000 concurrent users.
- Email notifications should be sent within 5 seconds of triggering.
- PDF export should process lists of up to 10,000 records within 10 seconds.

### **5.2 Scalability Requirements**

- System should allow integration with additional authentication methods like OAuth.
- Supports scalability for databases with millions of user records.

### **5.3 Security Requirements**

- Ensures data encryption during transmission and at rest.
- Implements measures to prevent common vulnerabilities like SQL injection and CSRF.

## **5.4 Business Rules**

- Only Admins can manage user data and perform advanced actions.
- Users must have unique email IDs for account creation.
- Passwords must meet complexity requirements.
- System must comply with GDPR and similar data protection regulations.

## **5.5 Availability Requirements**

- System uptime should be at least 99.9%.
- Scheduled maintenance should be announced 24 hours in advance.

## 6. Appendices

### 6.1 Glossary

- JWT: JSON Web Token, a compact token format used for secure authentication.
- SHA-512: A cryptographic hash function used for password security.
- SMTP: Simple Mail Transfer Protocol, used for email communications.
- CRUD: Create, Read, Update, Delete operations.

### 6.2 Future Enhancements

- Integration with mobile applications.
- Support for multi-factor authentication.
- Real-time user activity monitoring.
